DETAILED ACTIONS

Specifications

1. *There is no description of figure 1h in the specifications.*

Abstract

2. The abstract of the disclosure is objected to because legal phraseology such as "**comprise**" is used. Correction is required. See MPEP & 608.01(b).

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 1-3 are rejected under 35 U.S.C. 112, second paragraph, as being **indefinite** for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1, "**the** sidewall of the trench, **the** portion of the oxide layer, **the** portion of **the** sidewall, **the** oxidability of **the** sidewall of the trench" lack a clear antecedent basis.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Mei (6,232,171 B1).

Art Unit: 2818

Regarding claim 1, Mei, (see figures 1-9, col. 7, lines 9-67, col. 8, lines 1-47), teaches a method for forming a bottle shaped trench comprising steps of: providing a substrate 100; forming a plurality of operation layers 110 on said substrate; forming a photoresist layer 180 on said operation layers to define a predetermined position; forming a trench 130, 160, 160' at said predetermined position; implanting predetermined material particles into an upper portion of a sidewall of the trench, said material particles reducing an oxidability of the sidewall of the trench (see col. 7, lines 22-30); oxidizing the sidewall of the trench to form an oxide layer 120', a portion of the oxide layer 120' formed at the portion of the sidewall implanted with the material particles is thinner than the portion of the oxide layer 170 formed at the portion of the sidewall not implanted with the material particles (see figure 8); and removing said oxide layer to form a bottle shaped trench (see figure 9).

Regarding claims 2-3, Mei, (see col. 2, lines 58-67, col. 7, lines 22-30), also teaches the material particles are implanted by tilt (angle) implantation, and nitrogen ions (as NH₃).

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Ajuria'612, Hung'823, Schrems'174, Gambino'755, Kudelka'254, Lin'757 are cited as of interest.

8. A shortened statutory period for response to this action is set to expired 3 (three) months from the date of this letter. Failure to respond within the period for response will cause the application to become abandoned (see 710.02 (b)).
